 - (d) very narrow but continuous areas of existing or potential vegetation up to 5 metres wide or discontinuous but occasionally wider areas of existing vegetation between 5 and 15 metres wide interspersed with permanent structures.
2. With reference to vegetation conditions in Section 1., illustrate potential streamside protection and enhancement areas in accordance with the following:
 - (a) if section 1. (a) or (b) applies, at least 30 metres wide measured perpendicularly away from the top of the bank for all fish bearing watercourses or for non fish bearing watercourses that are permanent;
 - (b) if section 1. (a), (b) or (c) applies, at least 15 metres wide measured perpendicularly away from the top of bank for non fish bearing watercourses that are non-permanent;
 - (c) if section 1. (c) applies, at least 15 metres wide measured perpendicularly away from the top of bank for non-fish bearing watercourses that are permanent;
 - (d) if section 1. (c) or (d) applies, the greater of the widths determined under section 1. (c) or (d) or at least 15 metres wide measured perpendicularly away from the top of the bank for all fish bearing watercourses;

3. If a watercourse is in a ravine that is less than 60 metres wide in total width from top of the ravine bank to top of ravine bank, not including the watercourse channel within its active floodplain boundaries, protection is to be consistent with section 2. (a) through (e), where appropriate, from the top of the ravine bank.
4. If a watercourse is in a ravine that is more than 60 metres in total width from top of ravine bank to top of ravine bank, not including the watercourse channel within its active floodplain boundaries, a protection and enhancement area must be at least 10 metres wide measured perpendicularly away from the top of the ravine bank.
5. In determining a potential streamside protection and enhancement area an applicant may provide information proposing to make allowances for one or more of the following:
 - (a) the potential to provide greater opportunity for streamside protection and enhancement than what would be achieved under sections 2. to 4.;
 - (b) the existence of obstacles that impair the ability to designate streamside protection and enhancement areas in accordance with subsections 2. to 4. including, but not limited to the following:
 - (i) biophysical conditions;
 - (ii) the utility of the existing parcel size;
 - (iii) existing roads, works or services;
 - (iv) proposed roads, works and services needed to provide access or services to otherwise developable land;
 - (v) the existence of artificial controls on the high water mark or water level of a watercourse.

Interpretation

In this Schedule:

"active floodplain" means an area of land within a boundary that is indicated by the visible high water mark or water level of a watercourse that is reached during annual flood events as evidenced by riparian area conditions described in the definition of "riparian area";

"fish" means all life stages of:

- (a) salmonids,
- (b) game fish, and
- (c) regionally significant fish;

"fish bearing watercourse" means a watercourse in which fish are present or potentially present if introduced barriers or obstructions are either removed or made passable for fish;

"non fish bearing watercourse" means a watercourse that:

- (a) is not inhabited by fish, and
- (b) provides water, food and nutrients to a downstream fish bearing watercourse or other water body;

"non-permanent watercourse" means a watercourse that typically contains surface waters or flows for periods less than 6 months in duration;

"permanent watercourse" means a watercourse that typically contains continuous surface waters or flows for a period more than 6 months in duration;

"permanent structure" means any building or structure that was lawfully constructed, placed or erected on a secure and long lasting foundation on land in accordance with any District or approval condition in effect at the time of construction, placement or erection;

"potential vegetation" is considered to exist if there is a reasonable ability for regeneration either with assistance through enhancement or naturally, and is considered to not exist on that part of an area covered by a permanent structure;

"ravine" means a narrow, steep sided valley that is commonly eroded by running water and with slope grades greater than 3:1;

"riparian area" means the area adjacent to a watercourse that may be subject to temporary, frequent or seasonal inundation, and supports plant species that are typical of an area of inundated or saturated soil conditions, and that are distinct from plant species on freely drained adjacent upland sites because of the presence of water;

"streamside protection and enhancement area" means an area adjacent to a watercourse that links aquatic to terrestrial ecosystems and includes both the riparian area vegetation and the adjacent upland vegetation that exerts an influence on the watercourse, the width of which is determined according to section 2.;

"top of the bank" means:

- (a) the point closest to the boundary of the active floodplain of a watercourse where a break in the slope of the land occurs such that the grade beyond the break is flatter than 3:1 at any point for a minimum distance of 15 metres measured perpendicularly from the break, and

(b) for a floodplain area not contained in a ravine, the edge of the active floodplain of a watercourse where the slope of the land beyond the edge is flatter than 3:1 at any point for a minimum distance of 15 metres measured perpendicularly from the edge;

"top of the ravine bank" means the first significant break in a ravine slope where the break occurs such that the grade beyond the break is flatter than 3:1 for a minimum distance of 15 metres measured perpendicularly from the break, and the break does not include a bench within the ravine that could be developed;

"watercourse" means a creek, pond, lake, river, stream, or brook, whether usually containing water or not and any spring or wetland that is integral to a watercourse;

"wetland" means land that is inundated or saturated by surface or groundwater at a frequency and duration sufficient to support and under normal conditions that supports vegetation typically adapted for life in saturated soil conditions, including swamps, marshes, bogs, fens, estuaries and similar areas that are not part of the active floodplain of a watercourse.
