

Navigating your heat pump journey

1.

Do your homework: do some research to learn the basics about heat pumps and energy efficiency.

2.

Make a plan: figure out what you currently have for home heating and what you want out of a heat pump.

3.

Get help: book a free Virtual Home Energy Consultation to get answers and support from a local energy expert.

4.

Review support programs: check program websites to identify rebates or financing you may be eligible for.

5.

Reach out to contractors: find local contractors through the CleanBC search tool and get at least 3 quotes.

6.

Select a contractor: pick a contractor who can provide the system you want at a cost that meets your budget.

7.

Schedule your installation: time to let the professionals get to work!

8.

Enjoy: Learn about your new system; submit your rebate applications; and enjoy your comfortable, green home.
