Sustainable Foodservice Purchasing Guide

PRODUCT AND PURCHASING GUIDELINES FOR THE NORTH SHORE

Quick Facts

- Reusable items are the best option
- Choose products that contain recycled content
- Choose uncoated wood products over bamboo
- Choose easily recyclable plastics 
- Most paper products are compostable
- Paper products coated with plastic cannot be composted
- Compostable plastics are not accepted in municipal composting and recycling programs – many compostable plastics do not break down at regional composting facilities

If your business uses bags or straws:

- Distribute by-request only
- Source high quality reusable bags capable of being used and machine washed at least 100 times
- If using paper bags, choose bags that contain at least 40% recycled paper content
- Avoid plastic bags

- Use sippy cup lids that don't require straws
- Distribute paper straws by-request only
- Avoid plastic straws – including plastic straws labelled compostable or biodegradable
